

Kensington Intros Video Adapters

Written by Marco Attard
25 September 2015

Kensington launches a selection of six new video adapters-- four of which designed for 4K/UHD resolution displays and two for traditional HD (1920x1080) monitors.

The adapters follow the launch of the Kensington SD4000 Universal USB Docking Station, a means for enterprise customers to leverage 4K displays or dual-monitors without need to upgrade laptops with an appropriate graphics card.

Adapters handling 4K displays include the VU4000 (with USB 3.0 to HDMI connection), VU4000D (USB 3.0 to DisplayPort), VM4000 (Mini DisplayPort to HDMI) and the VP4000 (DisplayPort to HDMI). All allow users to either mirror or extend laptop displays, are backwards-compatible with 1080p displays and can be used with Windows and Mac OS X machines.

Customers using traditional HD displays get the VM1000 (Mini DisplayPort to VGA) and the VM2000 (Mini DisplayPort to HDMI).
