

Peerless-AV Announces Motorised Collaboration Cart

Written by Marco Attard
10 August 2018

Peerless-AV presents the Motorised Collaboration Cart (SR598ML3)-- an extension of the Peerless-AV line of AV carts integrating the use of actuators, making it easy for users to raise and lower touch-enabled displays.

Designed for applications such as education and corporate settings, the cart seamlessly interacts with touch-enabled technology, allowing users to focus on presentation content and foster a participative environment everyone can take part in. The cart is ADA-compliant, and offers display height adjustment up to 650mm at the touch of a button.

For the utmost in safety the Motorised Collaboration Cart is UL962 listed, and features a safety limit function to automatically reverse direction in case it detects a collision in an upward, downward or lateral force. It carries a 6 outlet, 2160 joule-rated suppressor and a 4.5m pre-installed cord in the rear, as well as a large enclosure with space for small PCs, additional cables and keyboards, together with an opening for an external wifi antenna.

Despite the roomy enclosure, the base is designed to fit easily through doorways, and includes rubber bumpers to prevent damage to walls and dolls. It runs on 102mm swivel casters for rigidity, stability and quick assembly, and the pre-assembled design requires no wiring.
