

Christie Launches Multitouch 86-inch 4K UHD LCD

Written by Alice Marshall
20 September 2018

Christie announces the UHD861-LT-- an 86-inch 4K UHD LCD panel with an integrated touchscreen, designed for meeting and lecture rooms as well as applications such as menu boards and kiosks.

Part of the Christie Access series of displays (available in 55-, 65-, 75- and 86-inch sizes), the UHD861-LT is designed for 16/7 operation. It features USB playback and an OPS slot for integration with a distributed display solution, and ships with a set of OKTOPUS interactive presentation and collaboration software.

OKTOPUS is designed for interactive LCD panels, and allows users to annotate over numerous running applications or web browsers. The display is also a Crestron Connected device, allowing for seamless connection to Crestron networks for management and control over any web interface, including desktops, tablets and mobile devices.

“Our new 86-inch LCD panel is a great solution for wherever you need to create an impact, from huddle rooms to reception areas,” the company says. “In fact, our Christie Access Series of UHD LCD panels are not only competitively priced compared to mass-market consumer models, but also feature commercial-grade quality, backed by Christie’s service and support.”

The display ships by end 2018.
