

Epson announces the SureColor T5470M-- a 36-inch printer and integrated scanner making a multifunction solution for the printing, sharing and saving of technical documents, with "accurate" A1/D-size prints done in as fast as 22 seconds.

"Epson is committed to listening to customer feedback and incorporating suggestions into future products to continue developing powerful and easy-to-use solutions," the company says. "With an integrated scanner, the SureColor T5470M is designed to maximize collaboration and productivity and streamline workflow for innovative industry segments-- engineering, designing, architecture, construction jobs sites, and more-- all in a small, space-saving design."

The T5470M uses PrecisionCore MicroTFP printhead technology with Precision Droplet Control for clear images, precise lines and crisp text. The integrated scanner supports multi-page scanning and scan to USB drive functions, while UltraChrome XD2 archival pigment ink delivers durable prints. Further features include a 4.3-inch touchscreen, high-capacity ink cartridges and versatile print options such as easy printing from mobile devices.

The T5470M ships from September 2019.
