

Middle Atlantic Combines Power and Cooling

Written by Bob Snyder
29 October 2012

The **PowerCool Series** from Middle Atlantic claims to be the industry's first and only integrated power distribution and thermal management product. A family of single-space (1RU) power and cooling solutions, PowerCool uses Middle Atlantic's purpose-designed quiet blowers. Each blower unit removes 50 CFM of heated air while providing high static pressure to maintain airflow even in crowded racks. Middle Atlantic also says the unit is energy efficient, running only when temperatures breach a safe operating threshold and at proportional speeds to ensure they only function as fast as necessary.

Incorporating multi-stage surge protection with surge status notification, the PowerCool Series additionally offers protection against surges and spikes. Models are available with 15 or 20 Amps and 10 or 11 outlets. The PowerCool Series also includes a model with a black brushed and anodized finish to match the company's other higher aesthetic line of accessories. We are impressed with the look...
